

Dear Sirs:

I am a resident of the 310 Area Code. I am not employed by any phone company or related firm. I am opposed to an area code overlay that would require 10-digit dialing for all numbers. I would support either an area code split along geographic borders; or based on type of equipment (e.g. keep 310 for land lines and move all wireless phones to a new area code.) Calls within the same area code should continue to offer 7 digit dialing. Thank you for your consideration.
